OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
CT	11/26/1996		X	X	<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

During 1984-1996, radio-tracking surveys were performed on cutthroat trout in the Copper River-Delta, primarily 18 mile system and Alaganik Slough. One of the tagged cutthroat trout, ~~thought~~ believed to be nonresident due to its large size, was tagged in the 18 mile system and ultimately radio-tracked to McKinley Lake. The trout overwintered in McKinley Lake and left ~~that~~ in the spring.

HOLD PENDING MORE CONCRETE INFO ON ANADROMY
